LIMITED WARRANTY

Champion Industries Inc. (herein referred to as Champion), 3765 Champion Blvd., Winston-Salem, North Carolina 27105, and P.O. Box 301, 2674 N. Service Road, Jordan Station, Canada, L0R 1S0, warrants machines, and parts, as set out below.

Warranty of Machines: Champion warrants all new machines of its manufacture bearing the name "Champion" and installed within the United States and Canada to be free from defects in material and workman ship for a period of one (1) year after the date of installation or fifteen (15) months after the date of shipment by Champion, whichever occurs first. [See below for special provisions relating to glasswashers.] The warranty registration card must be returned to Champion within ten (10) days after installation. If warranty card is not returned to Champion within such period, the warranty will expire after one year from the date of shipment.

Champion will not assume any responsibility for extra costs for installation in any area where there are jurisdictional problems with local trades or unions.

If a defect in workmanship or material is found to exist within the warranty period, Champion, at its election, will either repair or replace the defective machine or accept return of the machine for full credit; provided; however, as to glasswashers, Champion's obligation with respect to labor associated with any repairs shall end (a) 120 days after shipment, or (b) 90 days after installation, whichever occurs first. In the event that Champion elects to repair, the labor and work to be performed in connection with the warranty shall be done during regular working hours by a Champion authorized service technician. Defective parts become the property of Champion. Use of replacement parts not authorized by Champion will relieve Champion of all further liability in connection with its warranty. In no event will Champion's warranty obligation exceed Champion's charge for the machine. The following are not covered by Champion's warranty:

a. Lighting of gas pilots or burners.
b. Cleaning of gas lines.
c. Replacement of fuses or resetting of overload breakers.
d. Adjustment of thermostats.
e. Adjustment of clutches.
f. Opening or closing of utility supply valves or switching of electrical supply current.
g. Cleaning of valves, strainers, screens, nozzles, or spray pipes.
h. Performance of regular maintenance and cleaning as outlined in operator's guide.
i. Damages resulting from water conditions, accidents, alterations, improper use, abuse, tampering, improper installation, or failure to follow maintenance and operation procedures.
j. Wear on Pulper cutter blocks, pulse vanes, and auger brush.

Examples of the defects not covered by warranty include, but are not limited to: (1) Damage to the exterior or interior finish as a result of the above, (2) Use with utility service other than that designated on the rating plate, (3) Improper connection to utility service, (4) Inadequate or excessive water pressure, (5) Corrosion from chemicals dispensed in excess of recommended concentrations, (6) Failure of electrical components due to connection of chemical dispensing equipment installed by others, (7) Leaks or damage resulting from such leaks caused by the installer, including those at machine table connections or by connection of chemical dispensing equipment installed by others, (8) Failure to comply with local building codes, (9) Damage caused by labor dispute.

Warranty of Parts: Champion warrants all new machine parts produced or authorized by Champion to be free from defects in material and workmanship for a period of 90 days from date of invoice. If any defect in material and workmanship is found to exist within the warranty period Champion will replace the defective part without charge.

<u>DISCLAIMER OF WARRANTIES AND LIMITATIONS OF LIABILITY.</u> CHAMPION'S WARRANTY IS ONLY TO THE EXTENT REFLECTED ABOVE. CHAMPION MAKES NO OTHER WARRANTIES, EXPRESS OR IMPLIED, INCLUDING, BUT NOT LIMITED, TO ANY WARRANTY OF MERCHANTABILITY, OR FITNESS OF PURPOSE. CHAMPION SHALL NOT BE LIABLE FOR INCIDENTAL OR CONSEQUENTIAL DAMAGES. THE REMEDIES SET OUT ABOVE ARE THE EXCLUSIVE REMEDIES FOR ANY DEFECTS FOUND TO EXIST IN CHAMPION DISHWASHING MACHINES AND CHAMPION PARTS, AND ALL OTHER REMEDIES ARE EXCLUDED, INCLUDING ANY LIABILITY FOR INCIDENTALS OR CONSEQUENTIAL DAMAGES.

Champion does not authorize any other person, including persons who deal in Champion dishwashing machines to change this warranty or create any other obligation in connection with Champion Dishwashing Machines.

Model Descriptions

Electric high temperature single tank and multiple tank rack conveyor dishwashers with built-in electric boosters in 40°F/22°C rise or optional 70°F/39°C rise.

Steam high temperature single tank and multiple tank rack conveyor dishwasher with built-in steam booster in 40°F/22°C rise or an optional 70°F/39°C rise booster.

Hot water coil dishwashers utilizing recirculating hot water through a wash tank heater coil to heat the wash water.

Electric low temperature chemical sanitizing single tank and multiple tank rack conveyor dishwasher.

Dual Rinse machines utilizing an auxiliary rinse to save energy and improve washability.

The installation, and initial start-up of your dishwasher must be performed by qualified electricians, plumbers, and authorized service technicians trained in commercial dishwashers.

Defects and repairs caused by unauthorized installers will not be covered by the dishwasher warranty.

Model Details

Champion single tank and two tank rack conveyor dishwashers are fully automatic. Standard equipment includes 1HP prewash, 2HP wash and 2HP power rinse pumps. The conveyor drive is a 1/6 HP motor. All models are available in right-to-left (R-L) or left-to-right (L-R) direction.

Model Numbers

Single Tank - Basic	44, 54, 44 WS, 44 LT
Single Tank with 22" Prewash	66 PW, 76 PW, 66 WS, 66 LT PW
Single Tank with 36" Prewash	80 HDPW, 90 HDPW, 80WS HDPW
Single Tank with 26" Front Feed Prewash	70 FFPW,80 FFPW, 70 WS FFPW

- The 44 DR and 54 DR basic models are high temperature 180°F/80°C hot final rinse water sanitizing dishwashers. Prewash options are available in 22", 36", and 26" front feed. Built-in stainless steel electric booster heaters in 40°F/22°C and 70°F/39°C rise are available and steam booster heaters in 40°F/22°C and 70°F/39°C rise. Dual-Rinse (DR) models feature a recirculating rinse that conserves energy.
- The 44 WS and 44 DRWS models are WaterSaver high temperature 180°F/80°C hot final rinse water sanitizing dishwashers. Prewash options are available in 22", 36", and 26" front feed. Built-in stainless steel electric booster heaters in 40°F/22°C and 70°F/39°C rise are available and steam booster heaters in 40°F/22°C and 70°F/39°C rise. Dual-Rinse (DR) models feature a recirculating rinse that conserves energy.
- The 44 LT and 66 LT models are low temperature 140°F/60°C sodium hypochlorite (chlorine bleach) sanitizing final rinse to maintain a minimum concentration of 50 PPM on the wares. The concentration of sanitizer must be tested at regular intervals using chlorine test papers.

Two Tank - Basic	64, 72, 84
Two Tank with 22" Prewash	86 PW, 94 PW, 106 PW
Two Tank with 36" Prewash	100 HDPW, 108 HDPW, 120 HDPW
Two Tank with 26" Front Feed Prewash	90 FFPW, 98 FFPW, 110 FFPW

- The 64, and 84 basic models are high temperature 180°F/80°C hot water final rinse sanitizing models. Prewash options are available in 22", 36", and 26" front feed. Built-in stainless steel electric booster heaters in 40°F/22°C and 70°F/39°C rise are available and steam booster heaters in 40°F/22°C and 70°F/39°C rise.

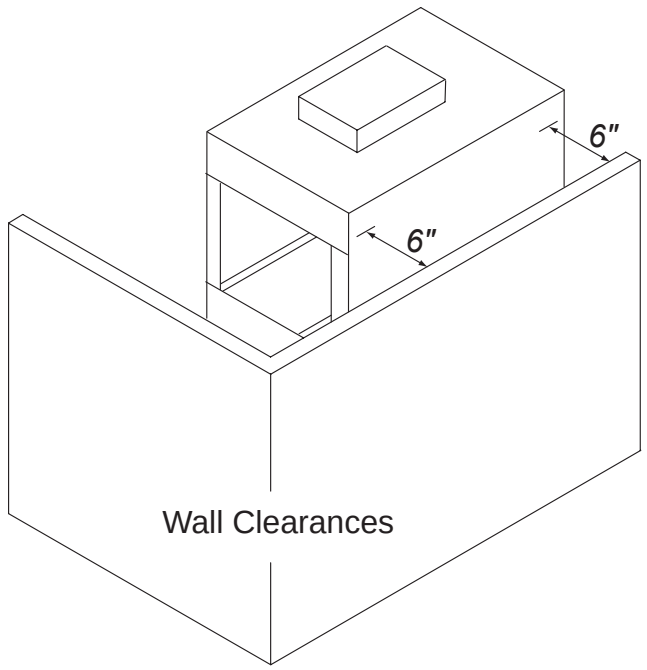
- All rack conveyor dishwasher models are covered by a 1-year parts and labor limited warranty.

Receiving

!!ATTENTION!!

Use caution when moving or lifting the dishwasher to prevent damaging the dishwasher or the installation site. Check doorway and passageway clearance before moving the dishwasher. Remove dishwasher front panels and check under the machine base for obstructions before moving.

1. Inspect the dishwasher for shipping damage
2. Check the dishwasher interior for curtains, panels and other supplies.
3. Lift the dishwasher off the shipping pallet and move the machine near its permanent location.
4. Leave a minimum of 6" between walls and the rear of the dishwasher.
5. Level the dishwasher side-to-side and front-to-back using a bubble level.
   The dishwasher legs are adjusted by screwing them in or out.
6. Do not remove tags attached to the utility connections.
7. Remove the protective film from the dishwasher exterior.
8. Remove any foreign material from the dishwasher interior.



Wall Clearances

Utilities

Hot Water Connections

NOTE:
Only qualified personnel should make dishwasher plumbing connections.
Connections must meet local plumbing and sanitary codes.
Improper installation is not covered be the dishwasher warranty.

Hot Water Requirements:

1. Connect a 3/4" NPT hot water supply line to the line strainer located at the top rear of the dishwasher.
2. For a dishwasher without a booster heater, the hot water connection must supply a minimum of 180°F/82°C measured at the dishwasher.
3. For a 40°F/22°C rise booster heater, the hot water connection must supply a minimum of 140°F/60°C measured at the dishwasher.
4. For a 70°F/39°C rise booster heater, the hot water connection must supply a minimum of 110°F/43°C measured at the dishwasher.
5. For a single wash tank hot water coil heated dishwasher, the hot water connection must supply a minimum of 185°F/85°C measured at the dishwasher.
6. For a two-tank hot water coil heated dishwasher, the hot water connection must supply a minimum of 195°F/91°C measured at the dishwasher.
7. For a low temperature chemical sanitizing dishwasher the hot water connection must supply a minimum of 140°F/60°C measured at the dishwasher.
8. Install a pressure regulating valve (PRV) before the dishwasher supply connection to maintain a flowing pressure of 20-25 PSI/137.8-172.4 kPa.
9. Install a service shut-off valve in the supply line, as close to the dishwasher as possible. The size of the valve must be the same size or larger as the supply line.

Cold Water Connections

Cold Water Requirements:

1. Connect a 1/2" NPT cold water supply line for a dishwasher equipped with a prewash cold water tempering option. Connection is located at the top of rear of the dishwasher load end.
2. Connect a 1/2" NPT cold water supply line for dishwashers required to have a drain water temperature tempering option. Request a P/N 452891 for a drain tempering water kit.

Drain Connections

1. The 1-1/2" drain line was removed and packed inside the dishwasher prior to shipping. Install the drain line once the dishwasher has been placed in its final location.
2. Dual rinse (DR) models have a PVC drain line assembly packed inside the dishwasher also. Remove this assembly and install it at the unload end of the dishwasher. The drain connection is made to the main drain line with a hose-type connector.
3. Connect the 1-1/2" NPT drain line to above a drain sink or to a 1-1/2" or larger drain line connection.
4. Observe all local plumbing and sanitary codes when installing.

Steam Supply and Condensate Connections

1. The size of the steam supply line must be a 2" NPT line.
2. Check the steam pressure requirements prior to connecting the steam supply lines. Standard high steam supply required is 15-30 PSI/103-201 kPa.
3. Low steam supply pressure is 7-14 PSI/48.2-96.5 kPa
4. Connect a steam supply line the same size or larger to the dishwasher at the steam supply strainer located at the unload end of the dishwasher.
5. Condensate lines must be gravity drain with no back pressure. A condensate lift pump must be installed if the condensate flow is above the finished floor.

Ventilation Connections

1. <u>DO NOT VENT THE DISHWASHER INTO WALLS, CEILINGS OR ENCLOSED PLACES.</u>
2. Vent stacks with adjustable dampers are supplied with the dishwasher to connect house vent.
3. Connect stainless steel water-tight duct inside the 4" x 16"/ 106mm x 407mm vent stacks supplied with the dishwasher.
4. A minimum of 6 air changes per hour of kitchen is recommended

Ventilation Guidelines:

Dishwasher without a prewash tank option:
Load end- 200 CFM @ 1/4" SP/ 95 Liters/second
Unload end- 400 CFM @ 1/4" SP/ 189 Liters/second

Dishwasher with a Prewash tank option:
Load end- 150 CFM @ 1/4" SP/ 95 Liters/second
Unload end- 400 CFM @ 1/4" SP/ 189 Liters/second

Dishwashers with more than two tanks:
Load end- 200 CFM @ 1/4" SP/ 95 Liters/second
Unload end- 400 CFM @ 1/4" SP/ 189 Liters/second

Electrical Connections

WARNING:
Electrocution or serious injury may result when working on an energized circuit.

Disconnect power at the main breaker or service disconnect switch before working on the circuit.

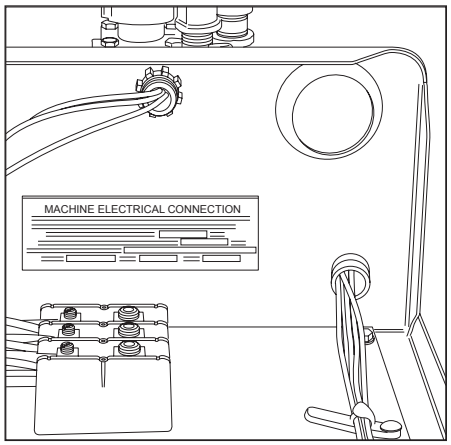
Lock-out and tag the breaker to indicate that work is being performed on the circuit.

ATTENTION

A qualified electrician must connect the main incoming power to the dishwasher in accordance with all local codes and regulations or in the absence of local codes in accordance with the National Electrical Code.

!!ATTENTION!!
Electrical and grounding connections must comply with the National Electrical Code or in the absence of a National Code then all Local Electrical Codes.

A qualified electrician **MUST** compare the electrical power supply with the machine electrical specifications stamped on the MACHINE ELECTRICAL CONNECTION PLATE located inside the control cabinet before connecting the main power to the dishwasher.

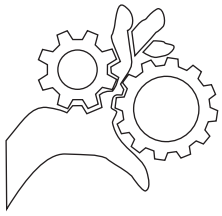


1. The Main incoming power to the dishwasher is made at the top of machine in the control cabinet.
2. The electrician must connect the incoming power based on the information that is stamped on the Machine Electrical Connection Plate.
3. Any change to the Machine Electrical Connection Plate must be approved by the factory in advance.
4. The dishwasher main power terminal block is located inside the top-mounted control cabinet.
5. A knock-out plug is provided at the rear of the control cabinet for electrical service connections.
6. Built-in electric booster heaters have a separate main power connection except Models 44 WS and 66WS.
7. Electric blower-dryers have a separate main power connection.
8. If the machine incoming voltage exceeds 208-240VAC then the Dual Rinse (DR) models have a step-down transformer mounted on the frame of the dishwasher to reduce the incoming voltage for the DR drain pump.

Electrical Connections (continued)

Motor Rotation

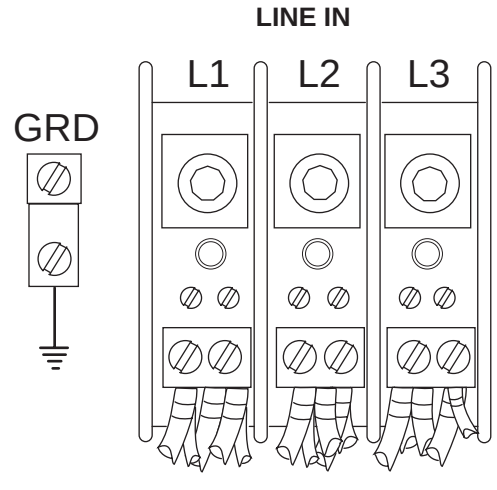
1. Motor rotation was set at the factory.
2. The conveyor drive motor rotation is indicated by a red arrow located on the side of the motor.
3. Check if all motors are running in the wrong direction.
4. Reverse the L1 and L2 wires on the output side of the dishwasher Main Terminal Block (MTB) located inside the top-mounted control cabinet.
5. The photograph to the right shows the conveyor drive motor with its direction arrow.
6. A wash pump/motor assembly can be seen in the back.



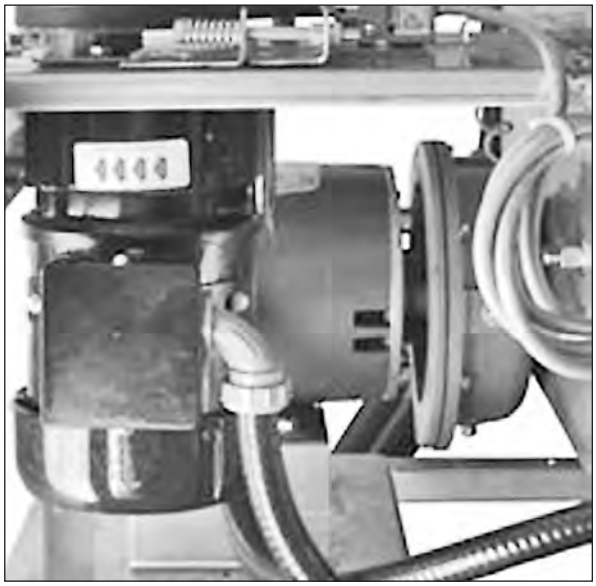
WARNING:
Moving Conveyor Parts may cause INJURY OR DEATH.
Keep hands and clothing clear of the conveyor when the conveyor is moving.

USE EXTREME CAUTION WHEN THE CONVEYOR IS MOVING.

THREE PHASE POWER CONNECTION



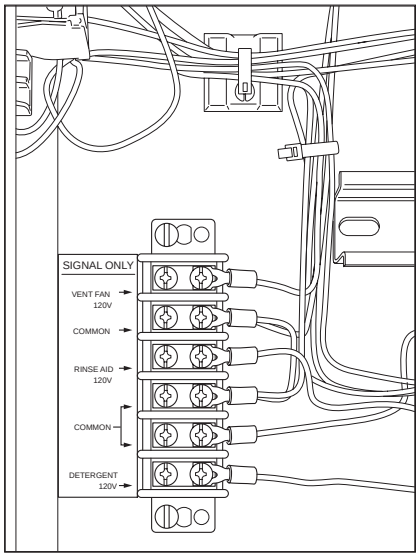
Main Terminal Block Inside the Top-mounted Control Cabinet.



Motor Direction Rotation Label on Motor Frame.

Chemical Connections

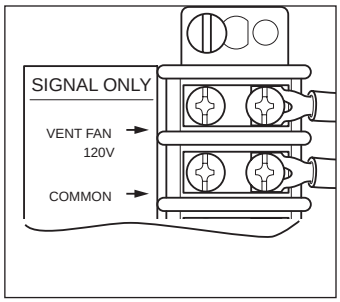
1. Use a qualified detergent/chemical supplier for detergent/chemical and dispensing equipment needs.
2. Labeled detergent control circuit connection terminals are provided in the control cabinet for detergent and rinse agent/sanitizer dispensing equipment (supplied by others).
3. The illustration on the right, shows the terminal board for the machine.
4. The signal connection points include:
   - Detergent signal 120VAC, 1A max load.
   - Rinse aid/Sanitizer signal 120VAC, 1A load.
   - Vent Fan 120VAC, 1Amp max amp load
5. A removable black plug is provided in the load end side of the wash tank for installation of the detergent conductivity cell.



Vent Fan Signal Connection

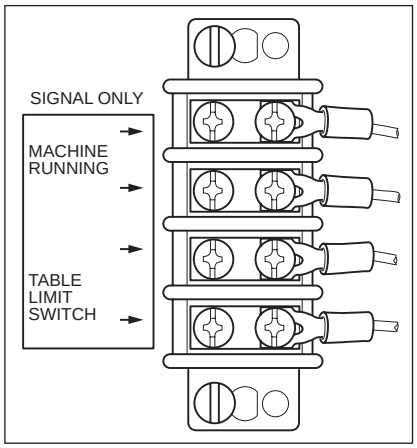
1. A terminal block is provided inside the top-mounted control cabinet to provide a 120VAC, 1 AMP Max Load signal.

NOTE:
The Vent Fan Signal Connection supplies 120VAC to a control relay (supplied by others) when the dishwasher is ON and O VAC when the dishwasher is OFF. Power to operate the vent fan (supplied by others) must be supplied separately.



Machine Running & Table Limit Switch Signal Connections

1. Connections are provided for systems that require that a signal to indicate the dishwasher is running.
2. A signal connection is provided to indicate that the dishwasher has stopped due to a conveyor jam or when the clean dish table is full of racks and additional racks cannot exit the machine.
3. The table limit switch option is recommended be installed on all dishwashers and can be ordered from the factory P/N 407400.

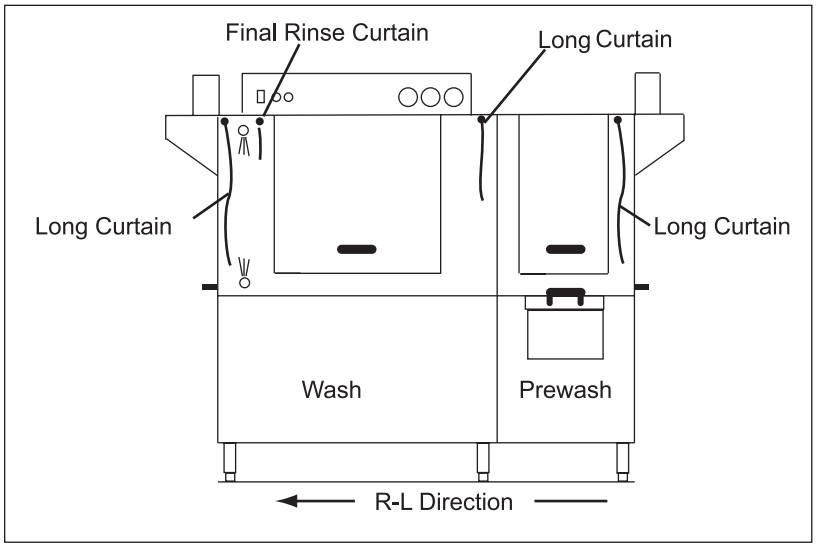


Curtain Locations

1. Refer to the illustrations below and hang the curtains as shown.
   J-hooks are located in the corners of each section to accept the curtain rods.

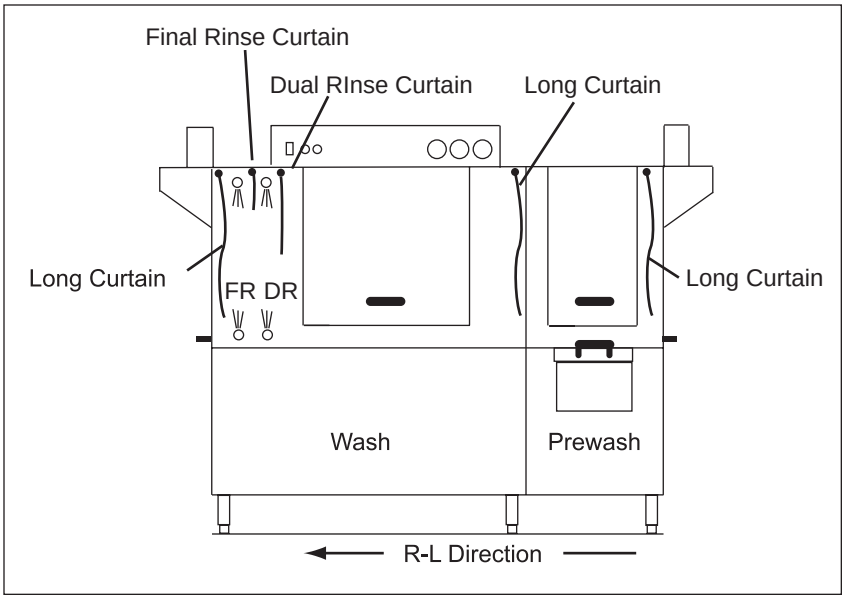
   - Standard long curtains 24” x 20-1/4”
   - High hood long curtains 24” x 22-3/4”
   - Standard short curtains and DR 24” x 13-/14”
   - High hood short curtains 24” x 20-1/4”
   - Final rinse curtain 24” x 6-1/4”

2. Make sure the that the short flaps of the curtains face the load end of the dishwasher. The longest curtains always go on each end of the dishwasher.



Single Tank Dishwasher Curtain Locations.

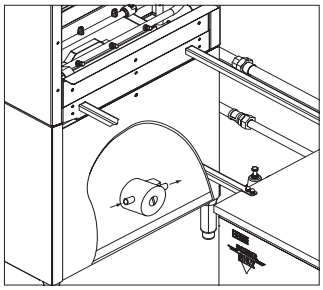
NOTE:
Misplacing a curtain or failing to install a curtain will adversely affect the proper operation of the machine.



Dual Rinse Single Tank Dishwasher with Prewash Curtains.

Hot Water Coil Tank Heat

Purging Air from the Dishwasher/Booster Heater System



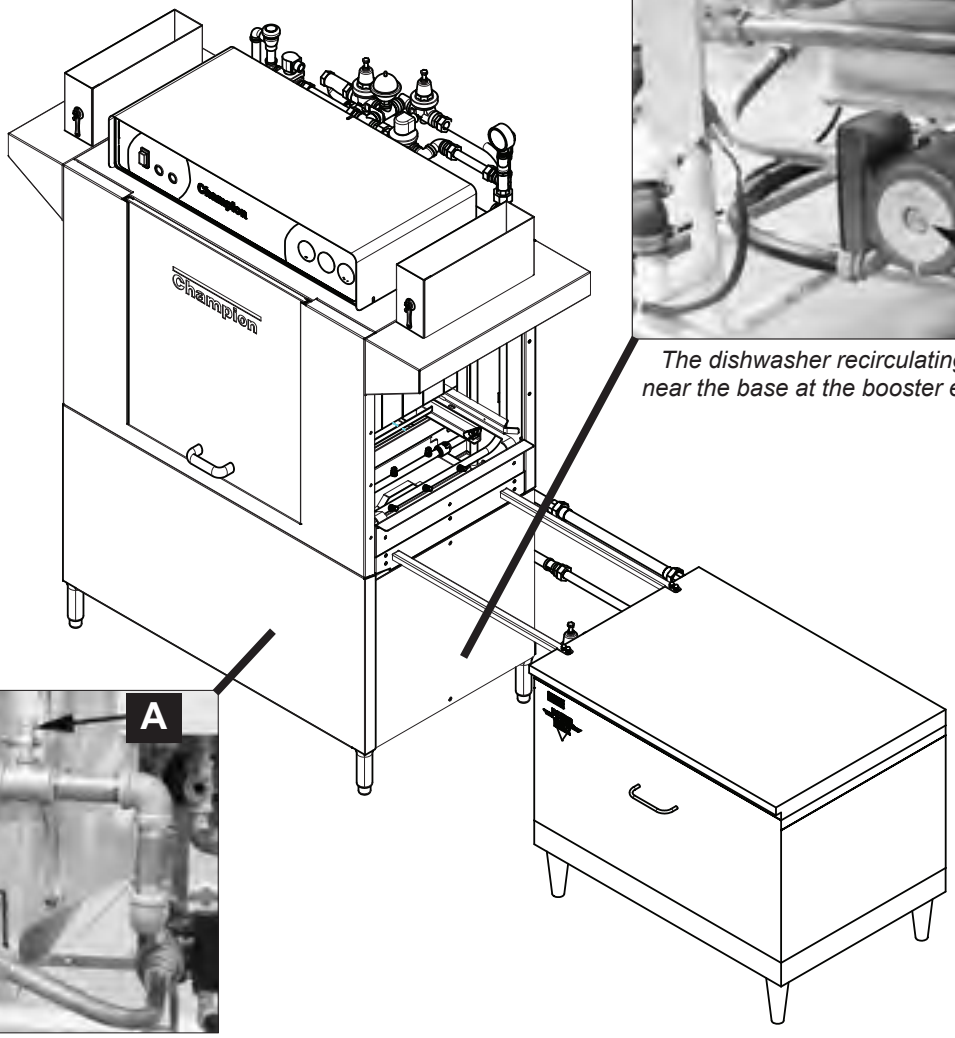
CAUTION:

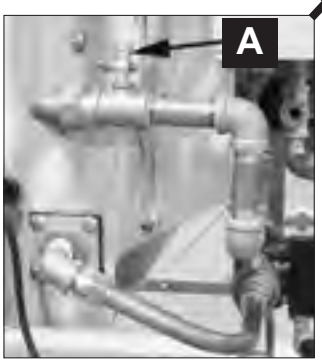
PERMANENT DAMAGE to the hot water recirculating pump can occur if the air is not purged from the dishwasher/booster heater system prior to placing the dishwasher into service.

Follow the instructions carefully to prevent damage to the dishwasher hot water recirculating pump.

The air trapped in the Dishwasher Hot Water Recirculating Pump and Water Lines must be purged. Refer to the illustration below and follow the procedure on the next page.

The dishwasher recirculating pump is located near the base at the booster end of the machine.





The air purge petcock is located behind the dishwasher lower front panel at the booster end of the machine.

Hot Water Coil Tank Heat

Purging Air from the Dishwasher/Booster Heater System (continued)

Refer to the illustration on the previous page and follow the procedure below to purge the air from the system. Plumbing and electrical service connections must be completed before purging the system.

To purge the air:

1. Make sure the dishwasher main power switch is OFF.
2. Make sure the main water supply valve located at the booster heater is OFF.
3. Open petcock (A) on the inlet side of the dishwasher hot water heater coil.
4. Remove the silver plug located in the center of the recirculating pump.
5. Turn the main water supply valve ON. Water will begin to fill the booster heater and the dishwasher heater coil.
6. Water and air will begin to flow out of the purge petcock and the recirculating pump and eventually only water will be observed.
7. Turn the booster heater power switch ON.
8. Turn the dishwasher power switch ON. The dishwasher wash tank will begin to fill with water.
9. Continue to observe the petcock and the recirculating pump and make sure that there is a steady stream of water is flowing from (A) and (B).
10. Replace the silver plug (B) in the center of the recirculating pump then close the petcock (A).
11. Turn the dishwasher power switch OFF.
12. Purging is complete.

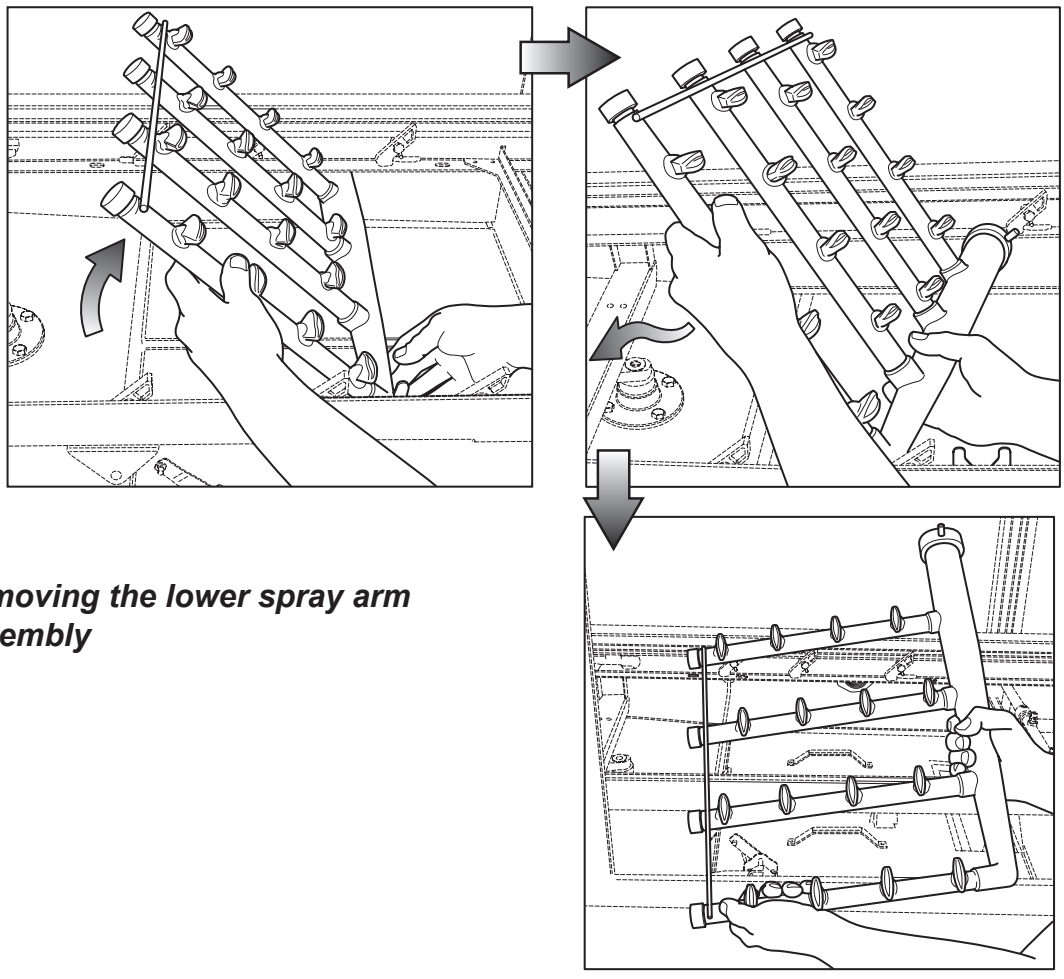
Door Safety Switches

Dishwasher access doors are equipped with a door safety switch that automatically stops the dishwasher pumps and conveyor drive if a door is raised while the dishwasher is running. In addition, the dishwasher will not start if a door is left open.

1. If the dishwasher is running and a door is raised, then lighted GREEN START pushbutton goes out and the pumps and conveyor drive stop.
2. Check the interior of the dishwasher for any dish racks still in the machine. These dish racks must be washed again to ensure they are washed and sanitized completely.
3. To restart the dishwasher, make sure all doors are closed, then push the GREEN START pushbutton.

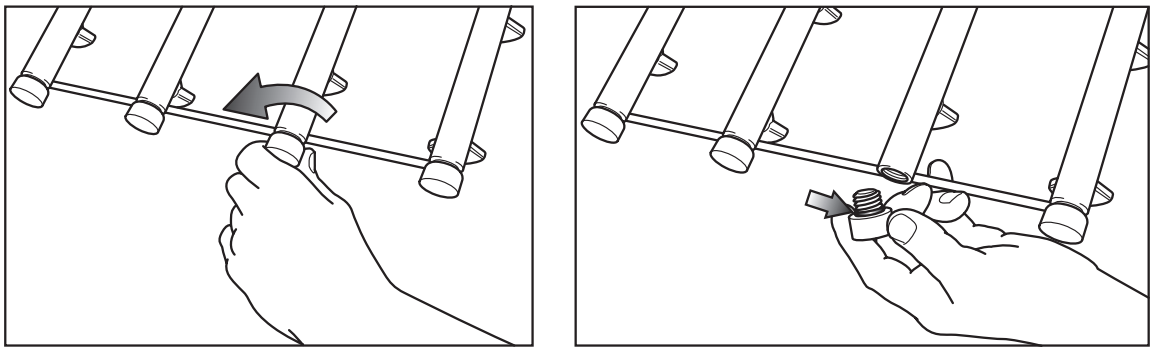
Spray arm and Scrap Screen Installation

The illustrations below and on the proceeding pages illustrate how to install and remove the spray arm assemblies and scrap screens.

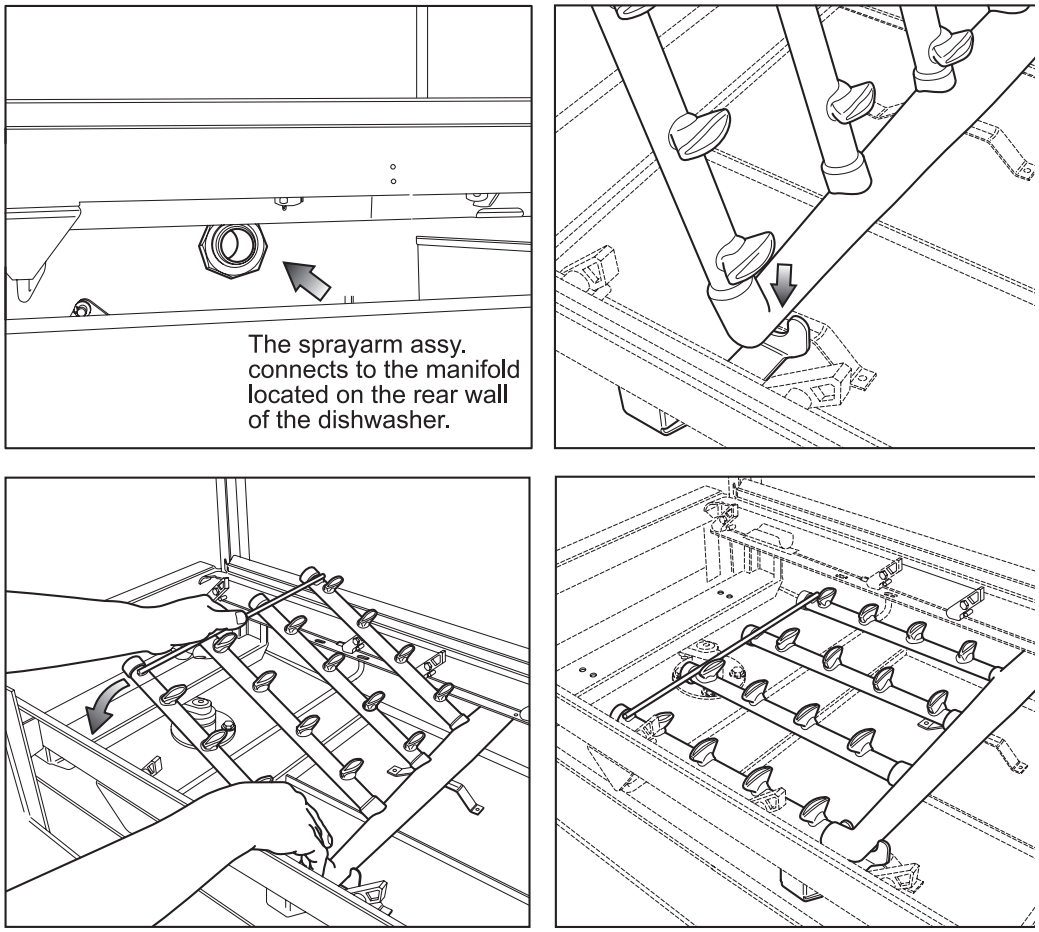


Removing the lower spray arm assembly

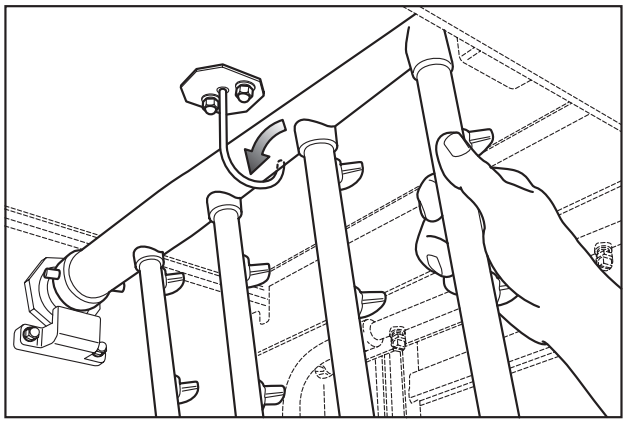
Removing the Spray arm End Plugs

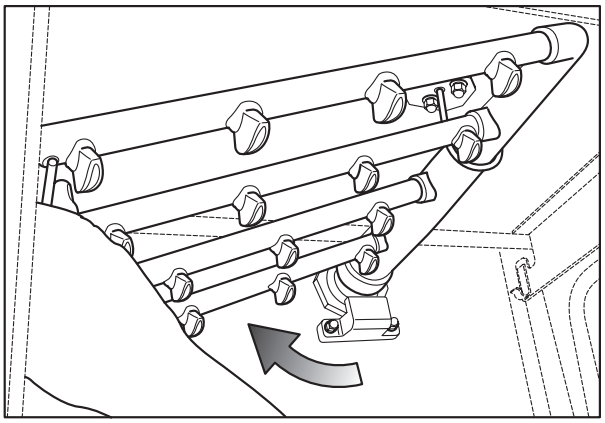


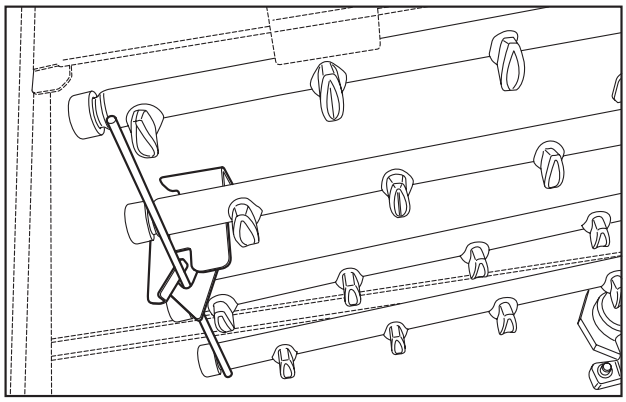
Installing the Lower Spray arm Assembly



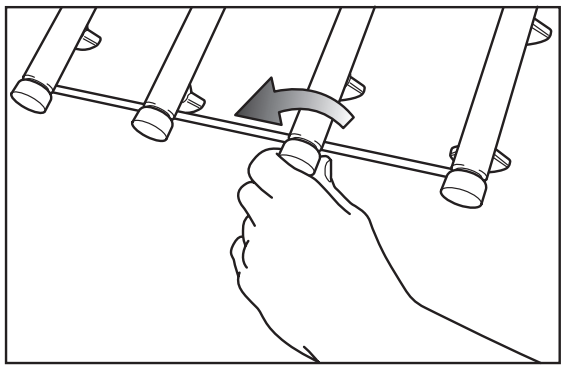
Installing the Lower Spray arm Assembly

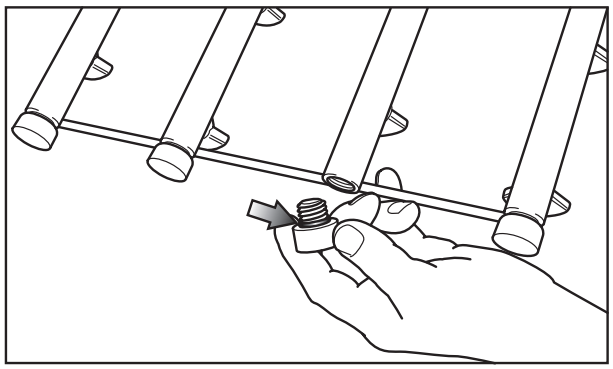




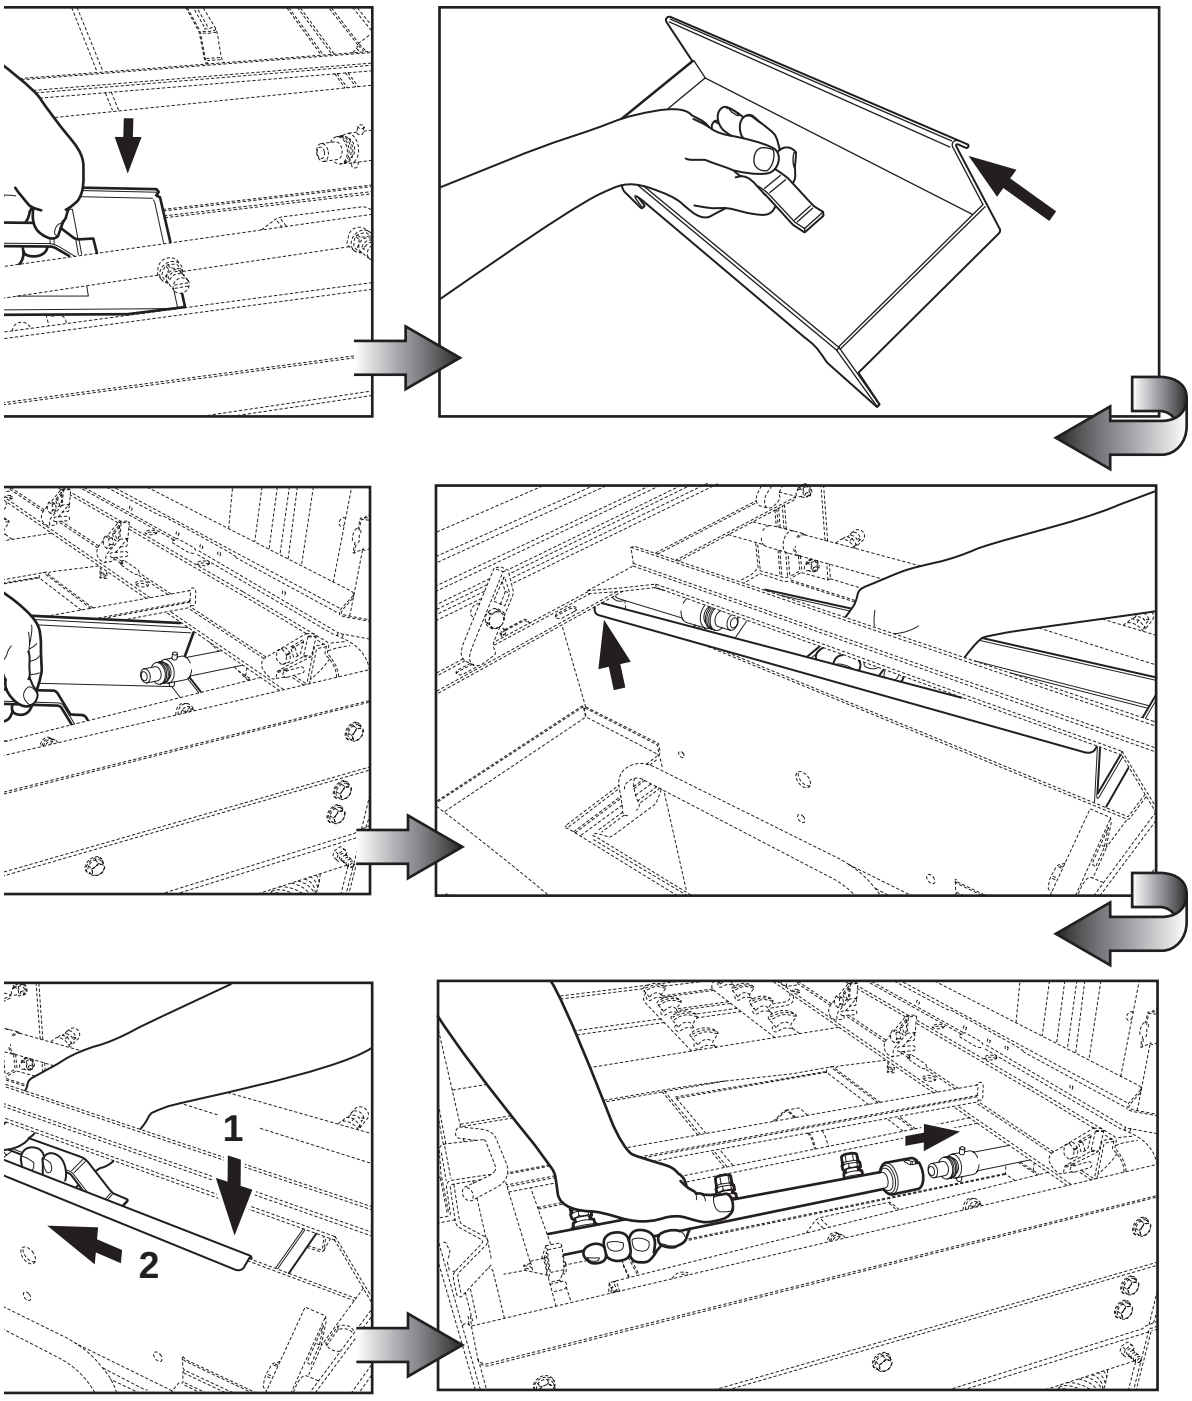


Removing the Spray arm End Plugs

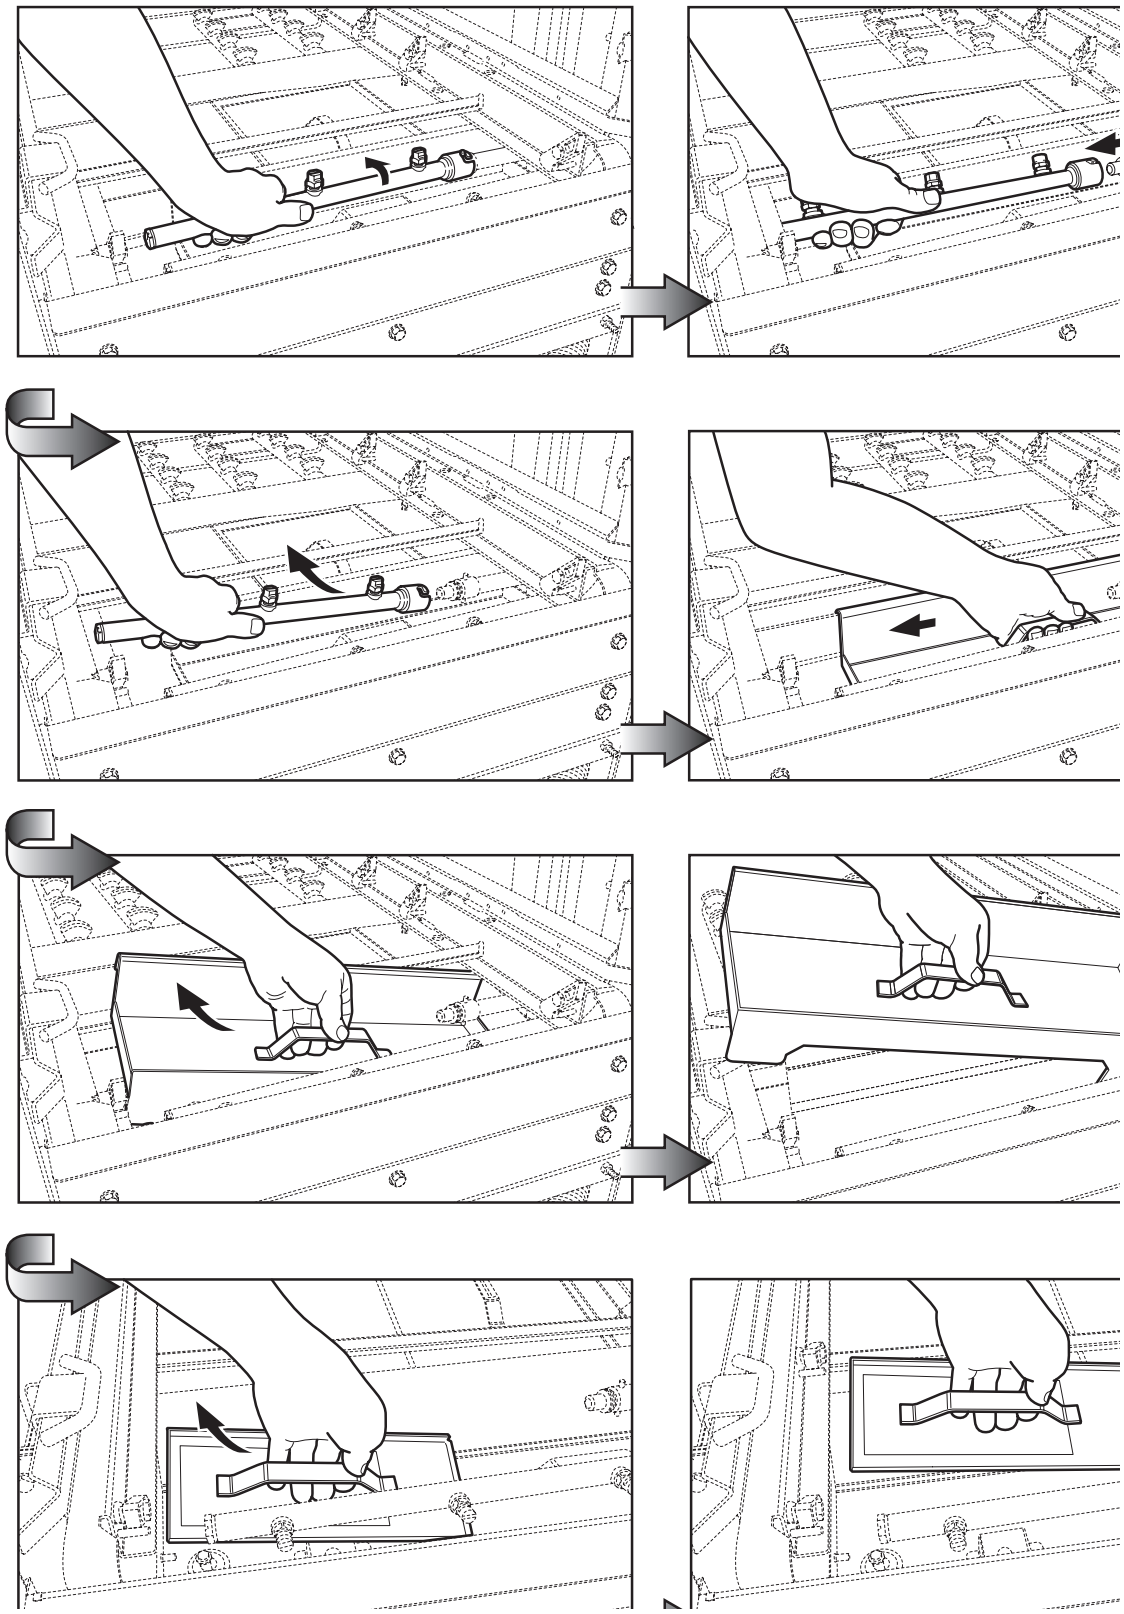




Removing the Dual Rinse (DR) scrap screens



Removing the Dual Rinse (DR) scrap screens (continued)



Check list

1. Remove white protective film from the dishwasher exterior.
2. Install lower panels to the dishwasher.
3. Remove any foreign material from inside of the machine.
4. Check dishwasher drain/overflows are closed and in securely seated.
5. Install scrap screens and baskets and spray arms.
6. Turn main utilities the dishwasher ON. (Power, water, steam if applicable).
7. Make sure doors are closed.
8. Turn dishwasher power switch ON.
9. Check tank water temperatures reach proper levels.
10. Check for leaks.
11. Drain the dishwasher and check that floor drains handle the water volume leaving the dishwasher.
12. Push the Start button.
13. Open each dishwasher door to make sure the safety switch stops the conveyor.
14. Restart the dishwasher.
15. Insert an empty dish rack into the load end of the dishwasher. The pumps and conveyor will run.
16. Allow the dish rack to travel to the unload end of the dishwasher. The final rinse and the DR rinse (if equipped) will run.
17. Allow the rack to exit the dishwasher. The dishwasher pumps should run an 90-seconds and stop.
18. Push the Stop button when the machine is running and the dishwasher should stop.
19. Push the dishwasher Power Switch OFF. The dishwasher should shut down.

Operation

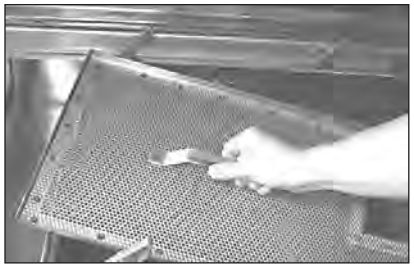
1. Check that the spray pipes, curtains, and scrap screens are in place and clean.
2. Check that the overflow drains are closed.
3. Check the chemical supplies. Turn on the detergent dispenser switches.
4. Turn on the exhaust vent system (if applicable), and make sure it is operating.
5. Close the door(s). Push the power switch ON, light will illuminate.
   Machine will begin to fill via the fill valve and the final rinse piping.
6. When the tanks are full, wait until the wash tank has reached the proper temperature. Check the wash tank temperature gauges located on the control cabinet. Minimum wash temperatures are:
   - 44 LT, 66 LT PW -140°F/60°C
   - 44, 54, 44 WS - 160°F/71°C to 175°F/79°C
   - 66 PW, 76 PW, 66 WS PW - 160-175°F/71-79°C
   - 2-tank (Wash) 150-165°F TO 66°F/74°C
     (Power Rinse) 165-180°F TO 74°F/82°C
   - Final Rinse for all models is a minimum of 180-195°F/82-91°C.
   - Dual Rinse (if equipped) is 165-180°F/74-82°C Rinse for all models.
   - Prewash for all models has no temperature rating.
7. Push the Green start button. The pushbutton illuminates indicating the dishwasher is ready for automatic operation.
8. Pre-scrap wares to remove large food particles and load wares into the dish racks.

   DO NOT OVERLOAD RACKS.

9. Pegged racks are for plates and/or trays. Flat racks are for bowls and/or silverware. Spread silverware evenly in a single layer in a flat rack or upright (loosely packed) in a cutlery rack/cylinder.
10. Push a dish rack into the load-end of the dishwasher until it contacts the idle pump switch lever, the conveyor and pumps will start.
11. The dishwasher will run for 90 seconds to wash, rinse and move the dish rack out of the unload-end of the dishwasher.
12. Inserting another dish rack into the machine before the first rack exits will keep the dishwasher running until the last dish rack exits the machine.
13. Check the final rinse pressure and temperature as the racks pass through the final rinse. This final rinse pressure MUST be 20-22 psi [137.8-145 kPa] and the final rinse temperature MUST be a minimum of 180-195°F/82-91°C .
14. The pumps and the conveyor drive will automatically stop after the last rack exits the machine.
15. The machine may be stopped at any time during the cycle by pressing the red STOP pushbutton. The green light or LED will go out.
16. Check the interior of the dishwasher for any dish racks still in the machine. These dish racks must be washed again to ensure they are washed and sanitized completely.
17. To restart, push the green START pushbutton and push another dish rack into the dishwasher load-end until the pumps and conveyor start again.
18. Repeat steps 7-10 until all wares are washed.

Cleaning

Cleaning your dishwasher is the best maintenance you can do.
The cleaning intervals below are the minimum requirements for most dishwashers.
You may need to clean your dishwasher more often when washing heavily soiled wares or during long hours of continuous operation.



Daily or every 2 hours of operation

1. Turn power switch to OFF.
2. Pull drain lever(s) to drain water. Remove scrap screens and scrap baskets.
   Clean inside of the tanks and flush with clean water.
   Back flush the scrap screens until clean.

DO NOT STRIKE SCREENS OR BASKETS AGAINST SOLID OBJECTS

3. Remove the spray arm assemblies. Remove the end cap from each spray arm.
4. Flush the spray arms and nozzles to remove any debris.
5. Replace the end caps. Check the condition of the manifold O-ring.
6. Reinstall the spray arms.
7. Remove and clean the curtains. Allow them to dry at the end of the day.
8. Leave the doors open between operations, allowing the machine to dry.
9. Make sure that the final rinse nozzles are clear of mineral deposits.
10. Straighten a metal paper clip to clean the nozzles.
11. Check the temperature and pressure gauge readings during operation.
12. Inspect the machine for signs of water leaks.
13. Check the chemical supplies and refill as necessary..

Cleaning (continued)

At the End of the Day

1. Perform Steps 1-10 on the previous page.
2. Remove the upper and lower rinse and wash spray arms and end plugs and flush with fresh water.
3. Remove the Dual Rinse (DR) rinse arm assemblies and flush with fresh water.
4. Clean the final rinse arm nozzles using a small paper clip.
5. Remove the curtains and clean with fresh water.

DO NOT USE STEEL WOOL TO CLEAN THE INTERIOR OF THE MACHINE.

Wipe the interior and exterior of the machine with a soft cloth and a mild detergent.

DO NOT HOSE THE EXTERIOR OF THE MACHINE WITH WATER.

6. Reassemble the dishwasher and leave the door open to allow overnight drying

7. Contact the chemical supplier for de-liming if required.

De-liming

Lime (scale) deposits are the result of minerals contained in the water feeding the dishwasher and appear as a white haze on the surface of the dishwasher. Severe scaling can appear as a granular deposit. These deposits are a result of the mineral content in the geographic area of the machine's location.

WARNING:
Death or injury can result from toxic fume when de-liming agents come in contact with Chlorine Bleach, or other chemicals that contain iodine, bromine, or fluorine.

USE EXTREME CAUTION WHEN HANDLING ANY DE-LIMING AGENT

CAUTION:
De-liming agents can cause chemical burns.
Wear rubber gloves, eye protection and any other protective clothing as instructed by a qualified chemical supplier and follow the instructions provided by the chemical supplier.

Maintenance

Weekly

1. Inspect all water lines for leaks and tighten at joints if required.
2. Clean any detergent residue from the exterior of the machine.
3. Check that the drain/overflow pipes seat tightly in their drains.
4. Clean any accumulated scale from the heating element.
5. Inspect the spray arms for any damage or missing parts.
6. Inspect the final rinse arms for missing parts.
7. Inspect the pawl bar and drive assembly for damage or missing parts.
8. Check that float switches move freely.
9. Check the idle pump actuator and the final rinse actuator for freedom of travel.

Monthly

1. Inspect interior of machine for lime deposits and clean.
2. Check o-rings on spray arm piping connections.
3. Check that the drain/overflow o-rings
4. Clean any accumulated scale from the heating element.
5. Inspect the spray arms o-rings and ensure all plugs are installed.
6. Inspect the final rinse arms for missing parts and are clean.
7. Inspect the pawl bar and drive assembly for damage or missing parts.
8. Check that float switches move freely.
9. Check the idle pump actuator and the final rinse actuator for freedom of travel.
10. Check the drive clutch and adjust as necessary.
11. Check the pump rotation and direction of rotation.
12. Check the operation of temperature gauges or displays.
13. Perform complete operation check.

Yearly

1. Contact authorized service agent to perform complete maintenance review of machine.
2. Correct any abnormal situations as recommended.

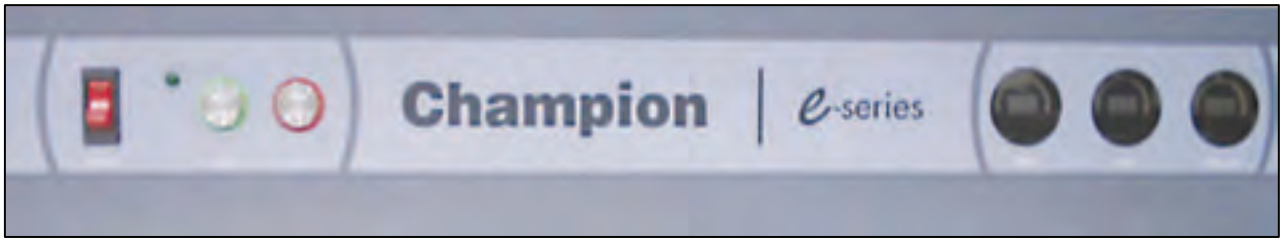
This Page Intentionally Left Blank

E-Rack Digital Temperature Display Meters

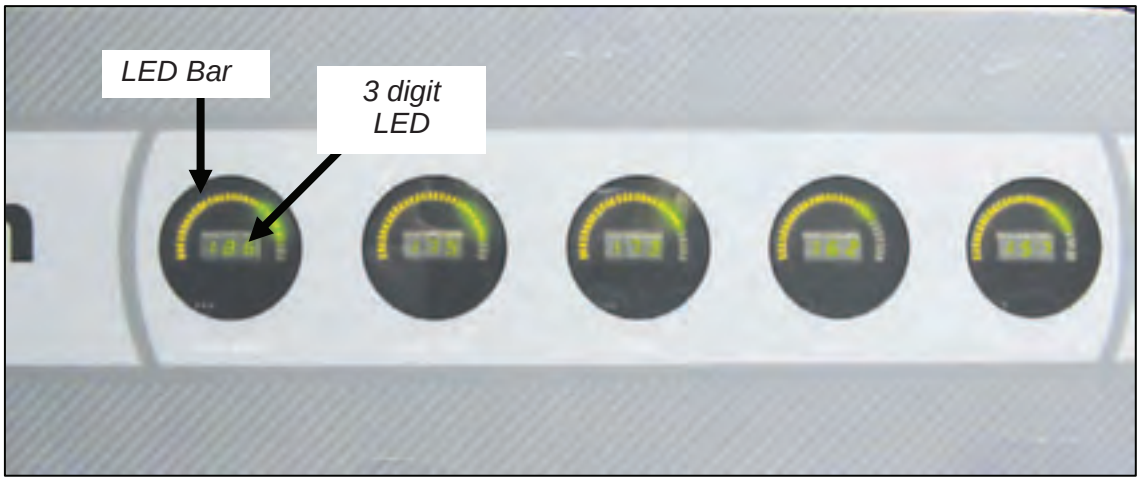
ATTENTION:
The Digital Temperature Displays only indicate temperature, they do not control wash tank or final rinse booster heaters. Electro-mechanical thermostats continue to control the tank and final rinse heat circuits.

1. The analog temperature gauges have been replaced with digital temperature display meters.
2. The meters display temperatures for the prewash tank (if equipped), the wash tank, power rinse tank (if equipped), the DR dual rinse tank (if equipped), and the final rinse.
3. A meter displays temperature in 2 ways:
   a. The first display is a semi-circular LED bar that moves from left to right; as the temperature increases in magnitude. The color of the bar changes from black, to orange, and to green.
   b. The second display is a 3 digit LED that changes from OFF if the tank or final rinse heat is disabled, to Blank and from a minimum temperature of 70° F to the maximum calibrated temperature set point of the meter.

   (Refer to the "Display Meter Operation Checks" on the next page to change a Meter set-point.)



Control cabinet showing digital temperature display meters on the right-hand side of the control cabinet.



Close-up view of the display meters. Note the semi-circular indicator bars and the numeric read-outs in the center.

Display Meter Operation Checks

Check the Meter LEDs:

1. Turn the Dishwasher Power Switch ON.
   The 3-digit LEDs illuminate simultaneously, then each LED bar illuminates from left-to right.

Check the Meter Temperature Set-point:
Refer to the photo below and the "Rear view of the Digital Display Circuit Board on the next page.

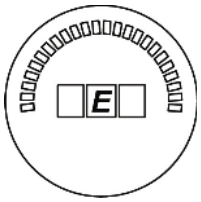
1. Remove the top-mounted control cabinet panel. Locate the CHECK pushbutton on the rear of the display. The push button is located at the top and center of the board.
2. There are 6 set-point values: 70,120 ,150,160,165, and 180° F.
3. Turn the dishwasher Power Switch ON, then
   Push and Hold the CHECK push button. Meter 1 flashes the current user-defined set-point. Meter 2 is blank.
4. Continue to Hold the CHECK push button. Meter 1 blanks out and Meter 2 flashes its current set-point value of 70,120 ,150,160,165, and 180° F.
5. Release the CHECK button. Meter 1 and Meter 2 display the actual temperatures in the wash tanks.
6. A final rinse Meter will display OFF until the final rinse switch is activated, then the meter displays the actual final rinse temperature which is measured at the final rinse manifold.

Change the Meter Temperature Set-point:
The set-point determines how the meter displays the yellow & green bar. For example, if the set-point is 70, then the bar displays yellow from 0-70 then green from 70 and above.

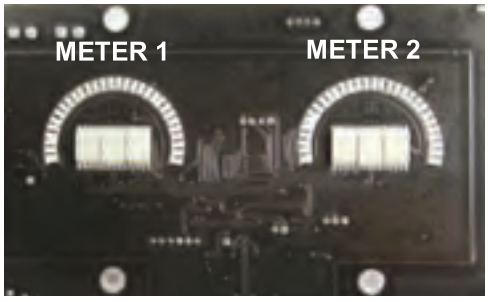
1. Push and Hold the CHECK pushbutton until Meter 1 display flashes.
2. Release the CHECK pushbutton. Meter 1 steps through the set-point values each time the CHECK pushbutton is pushed and released. The set-point value advances from 70,120,150,160 and 180° F.

Set-point value of 70°F

3. When the new set-point appears on the display, hold the CHECK pushbutton until the display flashes. The number that is displayed is the new set-point. If the display advances past the desired set-point, then repeat Steps 1-2.
4. In order to change Meter 2, Push and Hold the CHECK pushbutton until Meter 1 flashes. Continue to Hold the CHECK pushbutton until Meter 2 flashes, and then repeat Steps 2-3 for Meter 2.



Important:
The letter "E" appears in the center of the 3-digit display when the thermister is shorted or open.



Calibration:

Calibration is an internal function of the display circuit board and does not calibrate temperature control of the dishwasher components.

NOTE:
The Thermister Plug and 1 wire from the Rinse Switch Connector must be disconnected from the display circuit board before calibration.

To calibrate the display board:

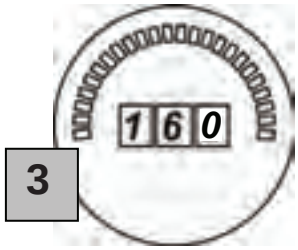
1. Turn dishwasher Power Switch OFF.
2. Disconnect the thermister plug and at least 1 wire from the rinse switch connector.
3. Turn Power Switch ON.
4. Press and hold the CHECK pushbutton while pressing and releasing the RESET button.
5. Release the CHECK pushbutton.
6. Display shows “CAL” flashing on METER 1 and METER 2.

NOTE:
If the display shows "EEE", then the thermister plug is not disconnected. Disconnect the thermister plug and repeat Steps 1-6 above.

7. Press and hold the TEST A pushbutton to calibrate Meter 1 *(Test B for Meter 2).*
8. The display calibrates and shows "160".
9. Release TEST A pushbutton. An "E" flashes in the center of METER 1.
10. Press the RESET pushbutton to exit the calibration mode.
11. Repeat Steps 2-8 to calibrate Meter 2.
12. Turn the dishwasher Power Switch OFF and reconnect the thermister plug and rinse switch connector wire.
13. Turn Power Switch ON and return to normal operation.

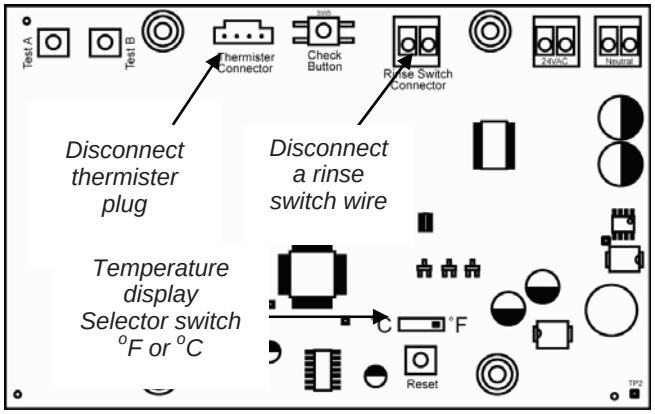
Thermister was not unplugged before calibration

Display board is in the calibration mode



Meter calibrated

Calibration complete when "E" flashes



Rear Detail View of Digital Display Circuit Board

Display Codes and Definitions

The illustrations below show the codes that may appear in the temperature meter displays.

START-UP

Number and bar LEDs cycle:

1. This is the Display segment test when the dishwasher power is turned ON.

Check for defective LED segments during the test.

ERROR

E displayed and bar is blank:

1. Thermister is open or shorted.

Troubleshoot the thermister circuit connected to the display meter.

OPERATION

Numbers and bar are blank.

1. Main power or dishwasher OFF.
2. Tank temp. below 70°F/21°C.

Turn power OFF, then ON to check display segments (see below).

ALL DISPLAY METERS

Numbers indicate between 70-209°F or 21-99°C, and the bar is illuminated left-to-right, from yellow to green:

1. Normal display meter operation.
2. Meter displaying temperature.

FINAL RINSE METER ONLY

OFF displayed - bar is blank:

1. Final rinse start switch is not operated and final rinse water is not flowing.

HHH displayed and entire the bar is lit:

1. The temperature in the tank has exceeded 210°F/99°C.

Reset the hi-limit thermostat, then adjust or replace the temperature control thermostat.

CALIBRATION

1

CAL displayed and bar is blank:

1. Display meter is in the calibration mode.

Press the RESET pushbutton on the display board to exit mode.

2

EEE displayed and bar is blank:

1. Display meter is in the calibration mode.
2. The thermister was not unplugged prior to calibration.

3

160 displayed and bar is blank

1. Display meter is calibrated.

The meter should flash "E" in a few seconds.

4

E flashes and bar is blank.

1. Calibration operation is complete for the display meter.

Press the RESET pushbutton on the display board to exit mode.

Before calling for service check the following conditions.

1. Dishwasher main power and water supply is on.
2. Machine has been assembled correctly.
3. Conveyor is clear of any obstructions.
4. Drains are closed.
5. Screens and pump intake screens are clear.
6. Doors are closed and secure.

Condition	Cause	Solution
Dishwasher will not run.	Door not closed. Main power OFF. Dishwasher OFF. Dish rack inserted wrong	Close door completely. Check breaker on panel. Turn dishwasher ON. Check dish rack loading.
Low or no water.	Main water supply off. PRV setting incorrect Solenoid strainer clogged. Solenoid valve defective.	Open supply valve. Adjust the PRV setting Clean strainer. Contact Service Agent.
Poor wash results.	Detergent not added to tank Wares incorrectly loaded. in dishrack. Clogged screens . Clogged spray arms. Thermostat defective. End plugs missing. Water temperature low.	Check detergent suppy. Reposition wares or reduce amount of wares. Clean screens.. Clean spray arms. Contact Service Agent. Check spray arms. Check incoming water temperature.
Dishwasher stays in wash cycle.	90-second timer defective	Contact Service Agent
Dishwasher conveyor will not run.	Conveyor jammed or table limit switch has stopped conveyor.	Check conveyor for jams Remove racks from load end of table.

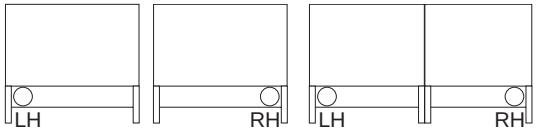
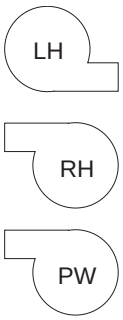
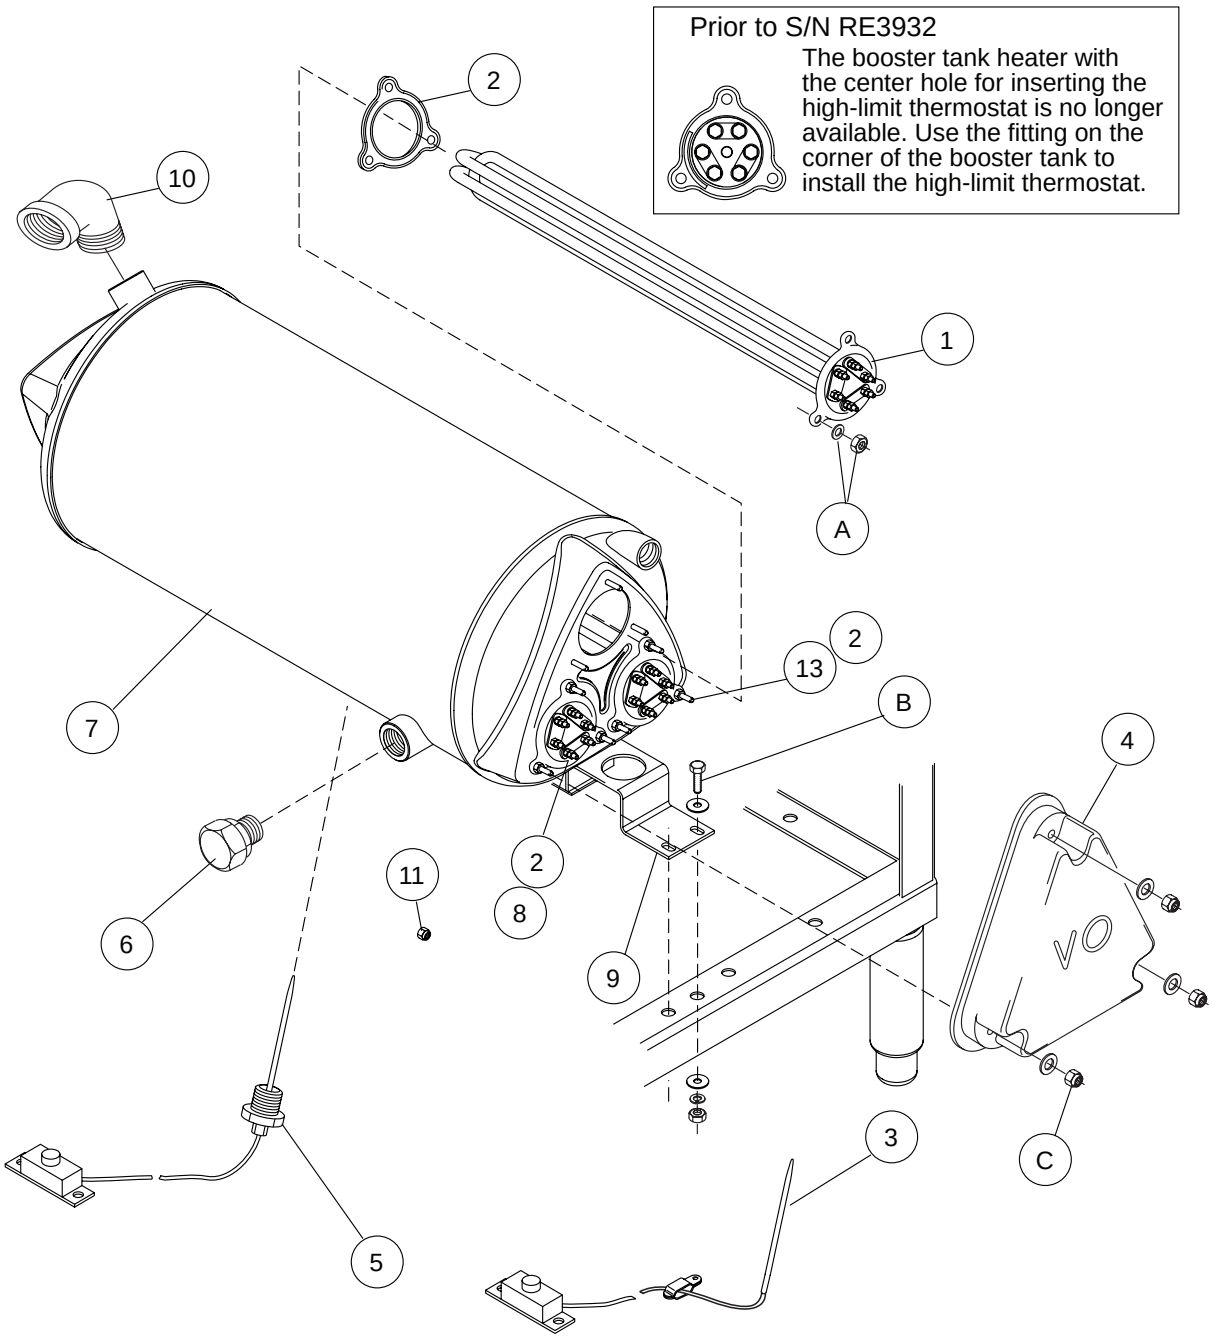
LH and RH indicate on which side of the machine the pump is located.





Pump Configurations



Prior to S/N RE3932
The booster tank heater with the center hole for inserting the high-limit thermostat is no longer available. Use the fitting on the corner of the booster tank to install the high-limit thermostat.

SINGLE TANK RACK W/PREWASH ELECTRIC HEAT DIGITAL DISPLAY

B702156-1 REV. 0

MODELS COVERED BY THIS DRAWING	
66PW	66WSPW
76PW	80HDPW

1CR	RACK SWITCH RELAY
2CR	FINAL RINSE SWITCH RELAY
3CR	DOOR SAFETY SWITCH RELAY
4CR	RINSE FILL RELAY
5CR	WASH FILL RELAY
6CR	PREWASH FILL RELAY
7CR	TABLE LIMIT SWITCH RELAY
1M	DRIVE MOTOR CONTACTOR
1MOL	DRIVE MOTOR OVERLOAD
2M	PREWASH MOTOR CONTACTOR
2MOL	PREWASH MOTOR OVERLOAD
3M	WASH MOTOR CONTACTOR
3MOL	WASH MOTOR OVERLOAD
BC–	BOOSTER CONTACTOR
BD	BLOWER DRYER
CR1/2	HOLD–IN RELAY
CWTS	COLD WATER THERMOSTAT
CWV	COLD WATER VALVE
FRFV	FINAL RINSE FILL VALVE
FRSW	FINAL RINSE SWITCH
FU	FUSE
HLTS	HIGH LIMIT THERMOSTAT
JSW	JAM SWITCH
PCB	POWER CIRCUIT BREAKER
PW	PREWASH DOOR SWITCH
PWFSW	PREWASH FLOAT SWITCH
RSW	RACK SWITCH
SP	STOP RELAY
ST	START RELAY
T1	CONTROL TRANSFORMER–120V
T2	CONTROL TRANSFORMER–24V
TLS	TABLE LIMIT SWITCH
TR1	IDLE PUMP TIMER
TS	THERMOSTAT
W	WASH DOOR SWITCH
WC	WASH HEAT CONTACTOR
WFSW	WASH TANK FLOAT SWITCH
WFV	WASH FILL VALVE

FOR TANK HEAT WIRING SEE DRAWING 113991

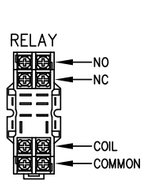
DIAGRAM STATE
POWER OFF
DOORS CLOSED
TANKS EMPTY



NOTES:

1. WHEN TABLE LIMIT SWITCH IS USED REMOVE JUMPER AND CONNECT LEADS BETWEEN WIRES 34 AND 35 ON TERMINAL BLOCK IN PANEL.
2. ON MODELS WITH SIDE LOADER OPTION DRIVE MOTOR CONTACTOR 1M IS CONNECTED TO WIRE #45 INSTEAD OF WIRE #7.
3. ON MODELS WITH MULTIPLE ELECTRIC CONNECTIONS, MAKE HEATER POWER CONNECTIONS AT THE HEATER FUSE BLOCK.

CUSTOMER TO SUPPLY RATED VOLTAGE/PHASE/Hz AS SPECIFIED PER ORDER. TO DISCONNECT SWITCH, ALL POWER SUPPLIED TO EACH CONNECTION POINT MUST COMPLY WITH ALL LOCAL ELECTRIC CODES.
